

See your farm like never before

Revolutionize how you manage all of your farm data. Use Field Manager PRO 360 to map and compare your operations, all tied into your Geographic Information System (GIS).

- View current satellite imagery of your entire operation.
- Draw and edit field boundaries.
- Import field data from equipment manufacturers to accurately map operations and observations.
- Optimize your input use with soil nutrient maps (pH, nitrogen, etc.).
- Analyze precise yield data with each field to find your best performers.
- Simplify your Nutrient Management Plans with a format that's easy to export.
- View your entire farm at a glance: all fields sorted by key characteristics such as crop and pesticide application.
