

# What's new in Field Manager PRO 2012

## Operations and additional tracking

1 Access a complete list of all pesticides registered in Canada with PCP numbers and group codes.

3 Calculate fertilizer application rates more simply.

2 Track plant densities to optimize seeding rates.

4 Identify total nutrients applied (pounds/acre).

## Reports

- Analyze density with the Plant Density Report.
- Generate Crop Insurance Seeding and Production reports.
- Access and edit current CanadaGAP forms.

## Nurseries/Greenhouse

- Set up and track optimum (post-emergent) plant density range.

## Fruit and vegetable

- Have the option to track perennial crops separately to reduce the amount of data entry year over year.

## Mobile and new technology

- Take advantage of the new Motorola ES400 all-in-one phone, scanner and camera with web access, GPS and Bluetooth.
- Secure your data with the automatic backup when you exit the mobile software.
